[illegible]

SECTION 1: UNDERSTANDING YOUR STARTING POINT

Before creating your fat-loss plan, you need three basic numbers:

1. Your current weight
2. Your estimated body fat percentage
3. How much body fat you want to lose

Since most beginners don't know their exact body fat %, you can use visual body fat charts for men and women.

HOW TO ESTIMATE YOUR BODY FAT FROM THE CHART

Example: You are a 70 kgs Male with 22-24% body fat.

1. **Current weight:** 70 kg
2. **Estimated body fat:** 22-24% (slightly softer midsection)
3. **Goal:** Reach 15% body fat

Fat-loss needed:

- Drop ~7-9% body fat (simple math $24-15 = 9\%$)
- To know how much kg you have to lose for goal.
(check the table below)

MEN (BASED ON IMAGE: 35% → 8%)

Current BF%	Target BF%	% to Lose	Approx Fat to Lose
45%	40%	5%	4–5 kg
45%	35%	10%	8–10 kg
45%	30%	15%	12–15 kg
45%	25%	20%	16–20 kg
45%	20%	25%	20–25 kg
45%	15%	30%	24–30 kg
40%	35%	5%	4–5 kg
40%	30%	10%	8–10 kg
40%	25%	15%	12–15 kg
40%	20%	20%	16–20 kg
40%	15%	25%	20–25 kg
35%	30%	5%	4–5 kg
35%	25%	10%	8–10 kg
35%	20%	15%	12–15 kg
35%	15%	20%	16–20 kg
30%	25%	5%	4–5 kg
30%	20%	10%	8–10 kg
30%	15%	15%	12–15 kg
25%	20%	5%	4–5 kg
25%	15%	10%	8–10 kg
20%	15%	5%	4–5 kg

WOMEN (BASED ON IMAGE: 45% → 15%)

Current BF%	Target BF%	% to Lose	Approx Fat to Lose
35%	30%	5%	4–5 kg
35%	25%	10%	8–10 kg
35%	20%	15%	12–15 kg
35%	15%	20%	16–20 kg
35%	12%	23%	18–23 kg
35%	8%	27%	22–27 kg
30%	25%	5%	4–5 kg
30%	20%	10%	8–10 kg
30%	15%	15%	12–15 kg
30%	12%	18%	15–18 kg
30%	8%	22%	18–22 kg
25%	20%	5%	4–5 kg
25%	15%	10%	8–10 kg
25%	12%	13%	10–13 kg
25%	8%	17%	13–17 kg
20%	15%	5%	4–5 kg
20%	12%	8%	6–8 kg
20%	8%	12%	10–12 kg
15%	12%	3%	2–3 kg
15%	8%	7%	5–7 kg
12%	8%	4%	3–4 kg

ESTIMATE YOUR GOAL.

1. **Current weight:** ____ kgs
2. **Estimated body fat:** ____ % (From the image)
3. **Goal:** ____ % (From the image)
4. **% to lose:** ____ % (From the table)
5. **Approx fat to lose:** ____ kgs (From the table)

How to Decide Your Weekly Calorie Deficit

Before you choose how many calories to cut, you must understand your own relationship with hunger and food.

This helps you decide whether you should lose weight aggressively or sustainably.

Step 1: Understand Your Hunger Response

To do this, follow a simple 3-5 day test:

Create a 16-hour fasting window.

Example:

- Stop eating at 9 PM
- Eat your first meal at 1 PM the next day
- Drink water, black coffee, or tea during fasting.

Why this test works:

A short fasting period helps you observe how your body reacts to hunger without emotional triggers or constant snacking.

Step 2: Notice Your Behavior During These 3-5 Days

If you feel calm, focused, and not emotionally attached to food:

- You are likely someone who handles hunger well.
- You can choose a more aggressive fat-loss pace.
- Recommended weekly deficit: ≈ 1 kg per week
(This means roughly $\sim 1,100$ kcal deficit per day.)

If you feel irritated, low-energy, or constantly think about food:

- You may be more sensitive to hunger.
- You need a slower, sustainable approach.
- Recommended weekly deficit:
 - 0.5-0.8 kg per week
 - (This means ~ 400 -800 kcal deficit per day.)

Step 3: If You Already Know Your Eating Behavior

Some people already know their eating style.

If you're one of them, you can skip the fasting test and directly choose your deficit:

- If you're chill with hunger → choose 1 kg/week deficit.
- If hunger affects mood or energy → choose 0.5-0.8 kg/week deficit.

Why This Step Matters

Choosing the right deficit ensures you:

- stay consistent
- don't quit after a week
- don't lose energy or gym performance
- avoid binge episodes
- reach your goal in the most predictable way

Your fat-loss journey becomes easier when your deficit matches your psychology not someone else's.

Now that you understand how your body responds to hunger, it's time to move into the most important part: creating your personalised calorie deficit.

Before create a deficit let's shortly understand calories and macros.

SECTION 2: UNDERSTANDING CALORIES & MACROS

What Are Calories?

Calories are simply a unit of energy. Your body uses them to breathe, digest food, think, walk, train, sleep, and survive.

Everything you eat gives your body calories, and everything you do burns calories.

A simple way to think of it:

- Eat more calories than your body needs → weight gain
- Eat fewer calories than your body needs → weight loss
- Eat the exact calories your body needs → weight maintenance

That's why understanding calories is a must before starting any fat-loss plan.

What Are Macros?

What Are Macros? (Macronutrients)

Macros are the three main nutrients in your food that give your body energy and help you function properly:

1. Protein
2. Carbohydrates
3. Fats

Each of them has a specific role and a specific calorie value.

Protein: 4 calories per gram

Protein is the nutrient that helps you maintain muscle, recover from workouts, and stay full for longer.

In fat loss, protein becomes your best friend because it keeps you from feeling hungry and prevents muscle loss.

Why you need protein:

- Helps keep your muscles while losing fat
- Reduces cravings
- Improves metabolism
- Keeps you full longer

Protein sources: Eggs, chicken, paneer, fish, dal, whey protein

Carbohydrates: 4 calories per gram

Carbs are your body's main source of energy.

They fuel your workouts, steps, cardio, and daily activities.

Why you need carbs:

- Give energy for training
- Support brain and muscle function
- Help maintain performance during fat loss

Healthy carb sources: Rice, roti, oats, fruits, potatoes, bread, millets

Fats: 9 calories per gram

Fats support hormones, brain health, and vitamin absorption.

Because fats have more than double the calories of protein or carbs, portion control matters.

Why you need fats:

- Hormone balance
- Skin & brain health
- Energy when carbs are low

Healthy fat sources:

- Nuts, seeds, olive oil, ghee, peanut butter, eggs, avocado

Fibre: 0-2 calories per gram

Fibre is not technically a macro, but it plays a huge role in fat loss.

Why fibre is important:

- Keeps digestion smooth
- Reduces hunger
- Improves gut health
- Slows down sugar spikes

Fibre sources:

- Vegetables, fruits, oats, nuts, whole grains, salads.

SECTION 3: CHOOSE YOUR DEFICIT & MACROS

Now that you understand how calories work and you've tested your hunger response using the 16-hour fasting window, it's time to calculate the most important number in your fat-loss journey, your maintenance calories

To find your **daily calories and macro intake**, you can use a simple online tool. In this guide, we'll use www.calculator.net/macro which gives you a clear breakdown of your daily calorie and macros needs and even shows recommended calorie deficits for weight loss.

Step 1: Go to the Website

Open your browser and visit www.calculator.net/macro

Step 2: Enter Your Personal Details

You'll now see a simple form. Fill it in as follows:

US Units	Metric Units	Other Units
Age	25	ages 18 - 80
Gender	☒ male ☐ female	
Height	180 cm	
Weight	65 kg	
Activity	Very Active: intense exercise 6-7 times/week	
Your Goal	Extreme weight loss of 2 lb (1 kg) per week	
+ Settings		
Calculate Clear		

Tip: Be honest and accurate - small errors can change your results.
You'll see options **Activity & Your Goal**.

ACTIVITY

Moderate: exercise 4-5 times/week	✓
Basal Metabolic Rate (BMR)	
Sedentary: little or no exercise	
Light: exercise 1-3 times/week	
Moderate: exercise 4-5 times/week	
Active: daily exercise or intense exercise 3-4 times/week	
Very Active: intense exercise 6-7 times/week	
Extra Active: very intense exercise daily, or physical job	

Your Activity Level must match the number of training days in the workout split you choose from the Training Protocol.

Your training protocol already tells you:

- how many days per week you'll train
- how intense those sessions will be

So choose the activity level that aligns exactly with your weekly training schedule.

Example: “Active: daily exercise or intense exercise 3-4 times/week”

Best splits from Training Protocol:

- Upper / Lower – Intermediate → Advanced (5-6 days/week)
- PPL split (Push/Pull/Legs) 4-6 sessions/week

Don't worry about this here.

Just remember what activity you chose and in training protocol just follow the suggested routine.

Everything will be mentioned there too.

YOUR GOAL

Extreme weight loss of 2 lb (1 kg) per week	✓
Maintain weight	
Mild weight loss of 0.5 lb (0.25 kg) per week	
Weight loss of 1 lb (0.5 kg) per week	
Extreme weight loss of 2 lb (1 kg) per week	
Mild weight gain of 0.5 lb (0.25 kg) per week	
Weight gain of 1 lb (0.5 kg) per week	
Extreme weight gain of 2 lb (1 kg) per week	

If you handle hunger easily, don't get attached to food, and felt comfortable during the 16-hour fasting test, you can choose the **Extreme weight loss** (1 kg) per week deficit. This is more aggressive and leads to faster results, but only works well for people who can stick to it consistently.

If you felt irritated, low energy, cravings, or emotional attachment to food, it's better to pick a **0.25-0.5 kg per week** deficit. This is called a sustainable deficit. It's easier to follow, keeps energy stable, and reduces the risk of cravings or giving up mid-way.

Step 3: Click “Calculate”

Now click the “Calculate” button below the form.

Balanced	Low Fat	Low Carb	High Protein	Create Your Own
Protein	141 grams/day Range: 65 - 164			
Carbs Includes Sugar	205 grams/day Range: 205 - 340			
Fat Includes Saturated Fat	66 grams/day Range: 44 - 77			
Sugar	<51 grams/day			
Saturated Fat	<22 grams/day			
Food Energy	1,925 Calories/day or 8,060 kJ/day			

This image shows your daily calorie target and macro breakdown based on the deficit you selected. Make sure you choose the **Low Carb option**, because it keeps your carbs controlled, your protein high, and helps you stay fuller during fat loss. It tells you exactly how much protein, carbs, and fats you should eat each day, along with your total calorie limit.

Your only job is to stay within these numbers so fat loss happens consistently.

Don't worry about building meals right now in the next section, we'll discuss how to create your meals using these macros in an easy and practical way.

SECTION 4: MILESTONE REWARDS

To keep your fat-loss journey consistent and mentally easier to follow, we use a **milestone reward system**. These rewards are not “cheat days”. They are smart, controlled breaks that help your body recover and your mind stay motivated.

These rewards come in two forms: **Diet Breaks** and **Refeed Days**.

Diet Break (For Aggressive 1 kg/week Deficit)

A diet break is a planned 7-day break from aggressive dieting.

During this week, you increase your calories from the 1 kg/week deficit level to the sustainable deficit level (the calories used for 0.5 kg/week fat loss).

This is not a cheat week. Food quality stays clean, but calories are slightly higher to help your body reset.

When you earn a diet break:

1. Only when you complete 14 full days of your aggressive deficit.
2. Only when you lose 2 kg during those 14 days.

How to take the diet break:

1. Increase calories from aggressive → sustainable level
2. Add more clean carbs (rice, roti, oats, potatoes, fruits)
3. Keep protein the same as before
4. Keep fats moderate and controlled
5. Do not binge or eat junk to “celebrate”
6. Continue your normal training + steps
7. Use this week as a reset, not a relaxation from discipline

Phase	Days	Calories	Action
Aggressive	1-7	Aggressive deficit	Follow diet + training strictly
Aggressive	8-14	Aggressive deficit	Complete 14 days + lose 2 kg
Diet Break	15-21	Sustainable calories	Add clean carbs, keep protein same
Aggressive	22-30	Aggressive deficit	Back to deficit with higher energy

Short Diet Break Example

If your extreme 1 kg/week calories are 1,400/day
and your easy 0.5 kg/week calories are 1,900/day:

Day 1-14: Eat 1,400 calories/day

Day 15-21 (Diet Break): Eat 1,900 calories/day

Day 22-30: Go back to 1,400 calories/day

This cycle keeps fat loss steady while preventing burnout and hunger crashes.

Refeed Day (For 0.25-0.5 kg/week Deficit)

A refeed is a single higher-calorie day designed to boost your energy, mood, metabolism, and training performance.

Instead of increasing calories for a full week (like a diet break), you increase them only for one day, mainly through clean carbohydrates.

A refeed is not a cheat meal. It is a controlled, structured increase to support long-term fat loss.

When You Earn a Refeed

You earn a refeed when:

1. You stay consistent for 4 full weeks.
2. You lose 2+ kgs in those 4 weeks.

This is your milestone reward for following the easy deficit patiently.

How to Take a Refeed Day

1. Increase calories only for 1 day
2. Main increase comes from carbs (rice, roti, oats, potatoes, pasta, fruits)
3. Keep protein the same as usual
4. Keep fats low and controlled
5. Do not binge or eat junk food
6. Best used before a heavy leg day or tough workout

Refeed Table:

Day	Calories	Protein (g)	Carbs (g)	Fats (g)
Mon	1900	140	200	60
Tue	1900	140	200	60
Wed	1900	140	200	60
Thu	1900	140	200	60
Fri	1900	140	200	60
Sat	1900	140	200	60
Sun (refeed)	2100–2200	140	250–300	60

Note: This is example for 1900 calories, and your weekly macros should look like this according to your body weight macros.

If your 0.25-0.5 kg/week calories are 1,900/day
and your refeed calories are 2,200/day:

Week 1-4: Eat 1,900 calories/day

Refeed Day: Eat 2,200 calories (higher carbs, clean food)

Next Day: Return to 1,900 calories/day

This gives you a clean reset without slowing fat loss.

SECTION 5: ADJUSTING

What To Do When Fat Loss Gets Stuck:

No matter how perfectly you follow your plan, you will eventually reach a point where your weight stops moving. This is completely normal.

It simply means your body has adapted to your current calorie intake, activity level, and weight. At this moment, you are not failing... your body has just reached a new balance point.

This is where the **adjustment phase begins**.

When you lose weight, your body burns fewer calories because you're carrying less mass. Even if you eat the same and train the same, the deficit slowly disappears. Your previous calorie deficit becomes your new maintenance without you even noticing. That's why fat loss pauses not because you're stuck forever, but because your body is telling you: "Update the plan for your new weight."

To adjust properly, the first step is to recognise that this is a natural stall. If your weight hasn't changed for about two weeks on the extreme plan, or four weeks on the easy plan, and you know you've been consistent, then you've simply reached the point where your numbers need updating. There's nothing to worry about. This is just part of the process.

The solution is to go back to the beginning of the system. You now have a new body weight, which means your calorie needs have changed. So you recalculate your maintenance calories using the same tool, enter your updated weight, choose the same activity level, select the low-carb option, and let the calculator generate your new numbers. Lighter bodies require fewer calories, so your new maintenance will always be lower than before.

Once you have your updated numbers, you select your deficit again just like you did in the beginning. If hunger still feels easy to manage, you can go with the extreme 1 kg/week plan. If hunger feels stronger or your lifestyle is busy, stay with the easy 0.25-0.5 kg/week plan. This resets your fat-loss pace in a way that fits your body right now.

After that, you simply restart the same cycle you were following earlier.

For the extreme plan:

14 days → lose 2 kg → take a 1-week diet break → repeat.

For the easy plan:

4 weeks → lose 2 kg → take a 1-day refeed → repeat.

This cycle continues until you reach your target body fat. Nothing changes except the numbers, the strategy stays the same.

In simple words:

When fat loss stops, you don't quit.

You simply update your numbers and continue from the top.

Fat loss is not one long straight line. It's a repeated pattern of:

Lose → Reset → Adjust → Repeat.

FULL FAT-LOSS GUIDE SUMMARY

START → SECTION 1: KNOW YOUR STARTING POINT

- ✓ Check your weight
- ✓ Estimate body-fat % from the image
- ✓ Decide your goal % and how many kilos you need to lose

SECTION 2: TEST YOUR HUNGER RESPONSE

- ✓ Do a 16-hour fast for 3-5 days
- ✓ See how your hunger feels

Hunger moderate → Extreme 1 kg/week

Hunger high → Moderate 0.25-0.5 kg/week

Already know yourself? → Skip fasting

SECTION 3: CALCULATE CALORIES & MACROS

- ✓ Go to the macro calculator
- ✓ Choose correct Activity Level
- ✓ Select Low Carb
- ✓ Get your:
 - Daily calories
 - Protein, carbs, fats
 - Extreme & Easy calorie options

SECTION 4: FOLLOW YOUR PLAN + EARN MILESTONES

If you chose EXTREME plan:

Follow 1 kg/week calories for 14 days

Lose 2 kg → Earn 1-week Diet Break

After break → repeat cycle

If you chose MODERATE plan:

Follow easy calories for 4 weeks

Lose 2 kg → Earn 1 Refeed Day

After refeed → repeat cycle

SECTION 5: ADJUSTING (ONLY WHEN FAT LOSS STOPS)

- ✓ If weight stops :
 - Your body adapted
 - Your old deficit is gone
- ✓ Recalculate calories using new weight
- ✓ Choose your deficit again
- ✓ Restart the same cycle from the top

Fat loss = Repeat:

Lose → Reward → Reset → Adjust → Lose again

END → Reach Your Goal

The cycle continues until you reach your target body fat.

MEAL BUILDING:

Building meals should be simple. You don't need perfect meals. You just need a balanced plate that hits your protein, carb, fat, and fibre targets in the easiest way possible.

The goal is to make everyday eating automatic, not stressful.

STEP 1: Choose How Many Meals You Want

You can divide your daily macros into:

- 3 meals per day, OR
- 4 meals per day (best option)

I recommend 4 meals/day

It keeps hunger low, energy stable, and makes tracking easier.

STEP 2: Use the “1-1-1-Fibre Formula”

Every main meal should include:

✓ **1 Protein Source : ~30-40% of the meal**

Examples: chicken, eggs, fish, paneer, tofu, whey protein

✓ **1 Carb Source: ~30-40% of the meal**

Examples: rice, roti, oats, quinoa, potatoes, fruits

✓ **1 Fat Source: ~20-30% of the meal**

Examples: ghee, butter, nuts, seeds, olive oil, eggs

✓ **Fibre: 10-15 g per meal**

Examples: vegetables, salads, fruits, oats, legumes

This creates a perfectly balanced fat-loss meal every single time, without needing complex recipes.

STEP 3 : Use This Plate Diagram

40% Protein

30% Carbs

25% Fats

5% Fiber

This is not exact science .

It's a visual cheat code to make meal building effortless.

Best Macro Tracking Apps

Short guide to using the HealthifyMe app for beginners:

1. **Download & Setup:** Download HealthifyMe, sign up, and enter your basic details (weight, height, goal, activity).
2. **Set Your Goals:** Go to "Goals" or "My Plan" and manually set your daily calorie and macro (protein, carbs, fats) targets based on your eBook's calculations.
3. **Log Your Food:** Use the "Add Food" button. Search for items, use the barcode scanner, or select from recent/favorite foods. Enter the quantity accurately.
4. **Monitor Progress:** The app shows your remaining calories and macros for the day. Aim to stay within your targets.

Tips to Make Tracking Easy

- Set your macro/carb/fat goals in the app before starting.
- Pre-log your meals in the morning to stay on track.
- Use barcode scanner for quick and accurate food entry.
- Save frequent meals so you can reuse them easily.
- Weigh food (initially) with a kitchen scale to learn portion sizes.
- Prioritize protein - always try to hit your protein goal daily.
- Use “Quick Add” to log estimated calories if in a rush.
- Track water & steps for bonus fat loss support.
- Be consistent, not perfect - 80% tracking = great results.

Morning Workout (8-10 AM Training)

Time	Meal	Focus
7 AM	Pre-Workout Snack	Light protein + carbs
9:30-10:30 AM	Post-Workout Meal (Breakfast)	Protein + higher carbs
1 PM	Lunch	Protein + balanced carbs/fats
5 PM	Snack	Protein + light carbs/fiber
8 PM	Dinner	Protein + veggies + healthy fats

Evening Workout (6-8 PM Training)

Time	Meal	Focus
8 AM	Breakfast	Protein + moderate carbs
12 PM	Lunch	Protein + balanced carbs/fats
4 PM	Pre-Workout Snack	Protein + carbs, low fat
7:30-8:30 PM	Post-Workout Meal (Dinner)	Protein + higher carbs
10 PM	Evening Snack	Protein + fats (slow-digesting)

Note: workout timing defers person to person for morning and evening so, only the pre and post workout meals timing will be changed

SIMPLE MEAL TEMPLATES - 1

Template 1: Indian Meal Protein: Chicken / Paneer / Eggs Carbs: Rice / Roti Fat: Ghee / Oil in cooking Fibre: Salad or veggies	Template 2: Bowl Meal Protein: Chicken / Egg whites / Tofu Carbs: Oats / Quinoa / Potatoes Fat: Nuts / Seeds Fibre: Greens + veggies
Template 3: Quick Meal Protein: Whey shake Carbs: Fruit (banana/apple) Fat: Peanut butter Fibre: Oats or chia seeds	Template 4: High-Protein Snack Protein bar or Greek yogurt Fruit for carbs Nuts for fats
Template 5: Egg-Based Meal Protein: Whole eggs / Egg whites Carbs: Bread / Potatoes / Oats Fat: Egg yolks / Little butter Fibre: Spinach / Salad / Veggies	Template 6: Stir-Fry Meal Protein: Chicken / Paneer / Tofu Carbs: Rice / Noodles (portion controlled) Fat: Olive oil (1 spoon) Fibre: Mixed veggies (capsicum, beans, carrots)
Template 7: Wrap/Roll Meal Protein: Chicken tikka / Paneer / Eggs Carbs: Roti / Whole-wheat wrap Fat: Low-fat dressing or 5–10g cheese Fibre: Lettuce, onions, cucumbers	Template 8: Sandwich Meal Protein: Chicken breast / Egg / Paneer Carbs: Whole-wheat bread Fat: Butter thin layer / Cheese slice Fibre: Lettuce + tomatoes + cucumbers

SIMPLE MEAL TEMPLATES - 2

Template 9: South Indian Plate Protein: Sambar (dal), idli with egg bhurji Carbs: Idli / Dosa / Upma Fat: Minimal oil used in cooking Fibre: Veg sambar + chutney	Template 10: North Indian Thali Protein: Dal / Chicken curry / Paneer Carbs: Roti / Rice Fat: Cooking oil (portion controlled) Fibre: Salad + sabzi
Template 11: Smoothie Meal Protein: Whey or Greek yogurt Carbs: Banana / Oats Fat: Peanut butter (1 spoon) Fibre: Berries / Chia seeds	Template 12: Snack Plate Protein: Boiled eggs / Paneer cubes Carbs: Fruit or sweet potato Fat: Nuts / Seeds Fibre: Veg sticks (carrot/cucumber)
Template 13: Rice Bowl Protein: Grilled chicken / Tofu / Paneer Carbs: Rice Fat: 1 spoon olive oil Fibre: Veggies + leafy greens	Template 14: Dinner Simple Plate Protein: Fish / Chicken / Paneer Carbs: Small portion rice or roti Fat: Ghee/oil in cooking Fibre: Steamed vegetables
Template 15: “Busy Day” Meal Protein: Greek yogurt or protein shake Carbs: Granola or fruit Fat: Almonds / Cashews Fibre: Apple / Berries	Template 16: Air-Fryer Meal Protein: Chicken breast / Fish Carbs: Sweet potatoes Fat: Spray oil or 1 tsp olive oil Fibre: Broccoli / Green beans

SIMPLE MEAL TEMPLATES - 3

Template 17: Dal + Rice Plate Protein: Dal / Eggs on the side Carbs: Rice Fat: Ghee (½ tsp) Fibre: Veggies + salad	Template 18: Omelette Meal Protein: Egg omelette Carbs: 1–2 slices toast Fat: Cheese (10g) or little oil Fibre: Veggies inside omelette
Template 19: Vegetarian High-Protein Meal Protein: Paneer / Tofu / Dal blend Carbs: Rice / Chapati Fat: Nuts / Ghee Fibre: Mixed veg sabzi	Template 20: High-Protein Dosa Meal Protein: Moong dal dosa / Paneer stuffing Carbs: Dosa batter Fat: Light oil Fibre: Veg chutney + sambar
Template 21: High-Protein Khichdi Protein: Moong dal / Added paneer cubes Carbs: Rice Fat: 1 tsp ghee Fibre: Vegetables mixed into khichdi	Template 22: Tawa Chicken/Panner Plate Protein: Tawa chicken / Tawa paneer Carbs: Roti or small rice portion Fat: Oil used in tawa cooking Fibre: Salad of onions + cucumber + greens
Template 23: Cottage Cheese Salad Protein: Paneer cubes Carbs: Sweet corn / Fruits Fat: Olive oil dressing (1 tsp) Fibre: Lettuce, cucumbers, tomatoes	Template 24: Fish & Rice Plate Protein: Grilled / Air-fried fish Carbs: Rice or mashed potatoes Fat: Light olive oil Fibre: Steamed veggies

HOW TO USE THESE MEAL TEMPLATES FOR YOUR OWN GOAL

These meal templates are examples, not fixed prescriptions. You use them based on your daily calories and macro targets from the calculator.

The goal is simple:

1. Hit your daily calories.
2. Hit your protein target.
3. Use the templates to build meals that match those numbers.

That's it.

Here's how to use them correctly:

1. Start With Your Daily Calorie Target

You already calculated your daily calories in the “Calories & Macros” section.

Now simply divide your calories by:

- 3 meals per day, or
- 4 meals per day (best option)

Example:

Daily calories = 1,800 kcal

4 meals → 450 kcal each

3 meals → 600 kcal each

This tells you how big each meal should be.

2. Use Any Template That Fits the Calories of That Meal

Each template is flexible.

If your meal target is 450 calories, choose any template and adjust:

- Portion of protein
- Portion of carbs
- Portion of fats

Example:

You choose the "Indian Meal" template

450 calories →

- 120 g chicken
- 1 roti / ½ cup rice
- 1 tsp ghee
- Salad

Same template, different portion sizes → fits your goal.

Essential Macro Food Table (Per Avg. Serving)

Food Item	Protein	Carbs	Fats
2 Boiled Eggs	12g	1g	10g
100g Chicken Breast	31g	0g	3.5g
100g Paneer (Low-fat)	18g	4g	8g
1 Scoop Whey (30g)	24g	2g	1g
1 Medium Banana	1g	27g	0g
50g Oats (dry)	6g	30g	3g
100g Cooked Rice	2.5g	25g	0.3g
2 Roti (Wheat, Medium)	6g	35g	4g
1 tsp Ghee (5g)	0g	0g	5g
10 Almonds	2.5g	2g	6g
100g Greek Yogurt	10g	3g	0g
100g Tofu	10g	2g	5g
100g Boiled Potato	2g	20g	0g

THE FAT LOSS CHECKLIST

Section 1: Starting Point

- ☐ I know my current weight
- ☐ I know my estimated body-fat %
- ☐ I know my fat-loss goal (kg or %)

Section 2: Hunger Testing

- ☐ I completed the 16-hour fasting test (3–5 days)
- ☐ I identified my hunger type:
 - ☐ Easy hunger → Extreme 1 kg/week
 - ☐ Sensitive hunger → Easy 0.25–0.5 kg/week

Section 3: Calories & Macros

- ☐ I calculated my maintenance calories
- ☐ I selected the correct Activity Level
- ☐ I selected the Low Carb macro option
- ☐ I wrote down my daily:
 - ☐ Calories
 - ☐ Protein
 - ☐ Carbs
 - ☐ Fats
- ☐ I know my per-meal target (3 or 4 meals/day)

Section 4: Following the Plan

- ☐ I selected my plan:
 - ☐ Extreme (1 kg/week)
 - ☐ Easy (0.25–0.5 kg/week)
- ☐ I follow my daily calories
- ☐ I hit my protein goal
- ☐ I train according to my chosen split
- ☐ I track steps, water, sleep

Milestone Rewards

☐ Extreme plan:

14 days consistent → Lose 2 kg → Diet Break earned

☐ Easy plan:

4 weeks consistent → Lose 2 kg → Refeed Day earned

Tracking

☐ I take weekly weight averages

☐ I track waist measurements

☐ I monitor hunger, energy, gym performance

Section 5: Adjusting

☐ If stuck:

– 14 days stall (Extreme)

– 28 days stall (Easy)

☐ I recalculated my maintenance calories

☐ I set a new deficit (based on hunger)

☐ I restarted the correct cycle

☐ I understand fat loss is:

Lose → Reward → Reset → Adjust → Repeat

Meal Building

☐ I use the 1–1–1–Fibre Formula

☐ I build meals using templates

☐ I hit my per-meal calorie target

☐ I include protein in every meal
